INTRODUCTION

Blue Cross and Blue Shield of Minnesota and Blue Plus are pleased to present the FlexRx drug formulary (drug list). Our goal is to give members access to safe and effective prescription drugs at a reasonable cost.

Brand-name drugs are not included in this formulary unless they are listed. Blue Cross may choose to not add a drug to the formulary because of effectiveness or safety concerns, or because a similar, more cost-effective drug is already on the formulary. New drugs are non-formulary (NF) until reviewed by the Pharmacy and Therapeutics (P&T) Committee and Coverage Committee.

Blue Cross encourages providers to prescribe formulary drugs.

PHARMACY AND THERAPEUTICS (P&T) COMMITTEE AND COVERAGE COMMITTEE

The Blue Cross Coverage Committee selects drugs for this formulary based on recommendations of an independent Pharmacy and Therapeutics (P&T) Committee that includes practicing physicians and pharmacists. Decisions to add or remove drugs from the FlexRx formulary are based on the drug's safety, effectiveness, uniqueness and cost. The P&T Committee and Coverage Committee meet at least quarterly. All drugs are reviewed each year as required by the National Committee on Quality Assurance (NCQA) standards.

You can find recent changes and the current version of the formulary at bluecrossmn.com.

FORMULARY GUIDELINES

The requirement of P&T and Coverage Committee review is a precondition of Blue Cross coverage and:

- Applies in addition to all other conditions and terms stated in Blue Cross contracts and stated herein; and
- Applies to medications and medical devices when administered in any manner that is approved by the U. S. Food and Drug Administration (FDA); and
- Applies to approved medications legally prescribed and medical devices legally used when administered in any manner that is not mentioned in the labeling approved by the FDA (referred to as an "off-label" use). Use of a medication or medical device for an indication, dosage form, dose regimen, population, or other use parameter not mentioned in the approved labeling is considered to be an "off-label" use.

These guidelines in no way imply that members should not receive specific services based on the recommendation of the provider. These guidelines govern coverage and not clinical practices. Providers are responsible for giving medical advice and treating members. Members with specific health care needs should consult an appropriate health care provider.

Members and providers have the right to appeal coverage decisions. These rights are explained in member and provider plan documents. Members with questions about appeal rights should call customer service at the number on the back of their member ID card. Providers can call provider services at **651.662.5200** or toll free at **800.262.0820**.

This information is not an offer of coverage, solicitation of coverage, summary of coverage or guarantee of coverage. All products and coverage guidelines are subject to applicable laws and regulations. Member or provider coverage is contingent on all the applicable terms, conditions, limitations and exclusions of member or provider plan documents.

GENERIC DRUGS

Blue Cross encourages use of generic drugs as a way to provide high-quality, cost-effective care. Generic drugs are safe, effective and cost less than brand-name drugs. Members will likely pay a lower copayment or coinsurance for a generic drug.

Frequently asked questions about generics

Are generics as good as brand-name drugs? Both brand-name and generic drugs must be approved by the FDA. Generic drugs meet the same high standards as brand-name drugs.

Why should I take generics rather than brand-name drugs?

We must all do our part to make health care affordable. One way is to be wise buyers of drugs. Generics provide the same effectiveness and safety as their brand-name counterparts, but for a lower cost. These lower costs generally mean lower copayments for members. Generics also save money for your health plan, so it can help keep insurance premiums as low as possible.

How can I take advantage of lower-cost generics? Ask your pharmacist for a generic whenever available. Also, talk with your doctor or other provider about prescribing generic drugs. Most drug classes include some generic drugs.

HOW TO USE THIS FORMULARY

This formulary is organized into broad treatment categories. In most categories, drugs are listed by drug class (e.g., penicillins) or drugs for a specific medical condition, like diabetes.

Generic drugs are shown in lowercase **bold** type. Most generic drugs are followed by a brand-name drug (in parentheses) to help you recognize the drug. The brand-name drug is listed for information only and is not on the formulary.

Example: **lisinopril** (Prinivil – brand is NF)

Brand-name drugs on the formulary are shown in capital letters.

Example: NIASPAN

All strengths and dosage forms of the immediate-release lisinopril generic or NIASPAN brand-name drug are on the formulary. Exceptions are usually noted. Oral liquid forms of generic or brand-name drugs are considered an alternative to tablets or capsules. They are on the formulary without being noted.

Separate drug listings are required for some dosage forms, including: extended-release, delayed-release, oral disintegrating tablets, injectables, nasal, ophthalmic, otic, rectal, topical patches and topical products.

Key

caps	capsules
chew tabs	chewable tablets
conc	concentrate
crm	cream
delayed-release	enteric coated
ext-release	extended-release
inhal	inhalation
inj	injection
lotn.	lotion
NF	non-formulary
ODT	orally disintegrating tabs
oint	ointment
soln	solution
supp	suppositories
susp	suspension
tabs	tablets

Compounded prescriptions

Compounded prescriptions contain two or more drugs mixed together. The end product cannot be available in an equivalent commercial form. Plus, at least one ingredient must be an FDA-approved prescription drug. Compounded prescriptions are processed according to member benefits.

Injectable drugs

Self-injectable drugs are generally part of the pharmacy benefit and may be included on the formulary. Injectable drugs are processed according to member benefits.

Some injectable drugs that need to be administered by a health care professional are covered only under the plan's medical benefit.

Medical supplies

Many diabetic supplies and spacers used with oral inhalers purchased in pharmacies are available on this formulary.

BENEFIT UPDATES

Specialty drugs

Blue Cross has an optional specialty pharmacy network.

Members with this benefit must obtain their specialty drugs from an in-network specialty provider or they will pay 100 percent of the drug cost. The in-network specialty pharmacies are:

- Triessent (for all specialty drugs)
- Fairview (for growth hormone, hemophilia and infertility drugs)

Drugs covered by this specialty drug benefit are listed at **bluecrossmn.com**.

Over-the-counter (OTC) drugs

Blue Cross has an OTC drug benefit. Members with this coverage may receive an eligible OTC product at their lowest cost. Covered OTC drugs require a prescription. Members can get a one-month supply of the following drugs with this benefit:

PROTON PUMP INHIBITORS:

Prilosec OTC

NON-SEDATING ANTIHISTAMINES

loratadine

loratadine/pseudoephedrine combination products

The program limits coverage to formulary and OTC drugs in these classes. Non-formulary drugs in these classes are not covered.

MANAGING DRUG USAGE

Prior Authorization (PA)

Some drugs require prior authorization (PA) because of their high potential for misuse or overuse. Coverage may be approved after certain criteria are met. Approval is required for claims to process at network pharmacies. Policies regarding the covered uses of drugs and drug classes requiring PA can be found at bluecrossmn.com. For more information, call provider services at **651.662.5200** or toll free at **800.262.0820**.

A written request for PA can be submitted by mail or fax.

Step Therapy (ST)

Step therapy programs help manage the cost of expensive drugs by redirecting members to equally effective, less expensive alternatives. Formulary and non-formulary drugs may be subject to step therapy. Formulary drugs subject to step therapy have "ST" behind them. If a member does not meet the criteria in the automated review of the member's claims, their doctor can submit a request for review. Forms for the review process are at providers.bluecrossmn.com in the Forms section.

Quantity Limits (QL)

Certain drugs have quantity limits (QL) to encourage appropriate drug usage, enhance drug therapy and reduce costs. The QL is the maximum quantity that can be dispensed over a given period of time. Formulary and non-formulary drugs may have quantity limits.

Drugs that have quantity limits as of October 1, 2009 (this list may change):

MEDICATION AUTHORIZATION REQUESTS

Prescribers may submit a Physician Request for Formulary Exception form for their patients. This form requests an exception for the following reasons:

Formulary exceptions:

- To request coverage of a non-formulary drug for a member with a closed formulary benefit plan
- To request a brand-name drug exception for a member with a mandatory generic plan

Quantity exceptions:

- To request a quantity exception for a drug with quantity limits

Step Therapy:

- To request coverage for a prescription drug that does not meet automated step therapy criteria at the point of service (pharmacy)

To obtain a Physician Request for Formulary Exception form call provider services at **651.662.5200** or **800.262.0820**.

You can also go to **providers.bluecrossmn.com** in the Forms section.

Please submit completed request forms to:
