Riddle of the Day
What does this read?

Answer in Wednesday’s NNB

Friday’s Riddle
A grocer has ten customers, each wanting to buy a 2lb bag of sugar. A 20lb bag of sugar was delivered that morning, but they had not yet divided it because they could only find the 5lb and 9lb weights. One of the customers, getting impatient, showed them the quickest way to measure the sugar with the two weights they already had. How did she do it?

Answer: She weighed out 4 pounds of sugar with the 5lb and the 9lb weights in different pans of the scales. With the 4lb weight, she weighed out three more lots of 4 pounds each. The remaining sugar will also weigh 4 pounds. She divided each 4lb portion equally on the two sides of the scales.
