Hernández/McKone Lab Summer Research Application

Biology professors Dan Hernández and Mark McKone are accepting applications for summer research assistants for summer 2015. The research will focus on various projects in the Carleton Arboretum on the ecology of prairie restoration, soil carbon and nutrient cycling, and the impacts of mammal herbivory on prairie communities. The project will involve extensive fieldwork, thus a willingness to work outside in summer conditions is required. Positions will be for 8-10 weeks beginning in late June/early July and continuing until the end of the summer. The exact dates of work are to be determined, but late summer is our busiest time so it is required that applicants are available to work up until the start of the fall term. Previous research experience is not required and we welcome applications from students of all backgrounds. Please email applications to dhernand@carleton.edu with the subject line “2014 Summer Research Application” by February 12, 2015.

Name:

Class year and Major (declared or anticipated):

Name of one Carleton faculty/staff member that can serve as a reference (no letter of recommendation required):

Relevant coursework:
