Greek Polytonic Keyboard (Macintosh)

Mac OS 10.5

This document shows the available characters on the Greek Polytonic keyboard layout that is built into the Macintosh OS.

## *Dead Keys (highlighted in orange)*

To add diacritics to characters, this keyboard uses dead keys. To add a diacritic to a character, first press the necessary key for the diacritic, release that key and then type the base character.

e.g. for ά type ; [release] **a**

Graphical Layout

Below are graphical layouts of the different states of the keyboard. Each keyboard state is labeled by the necessary modifier key (Shift, Option, etc) held down to create that state.
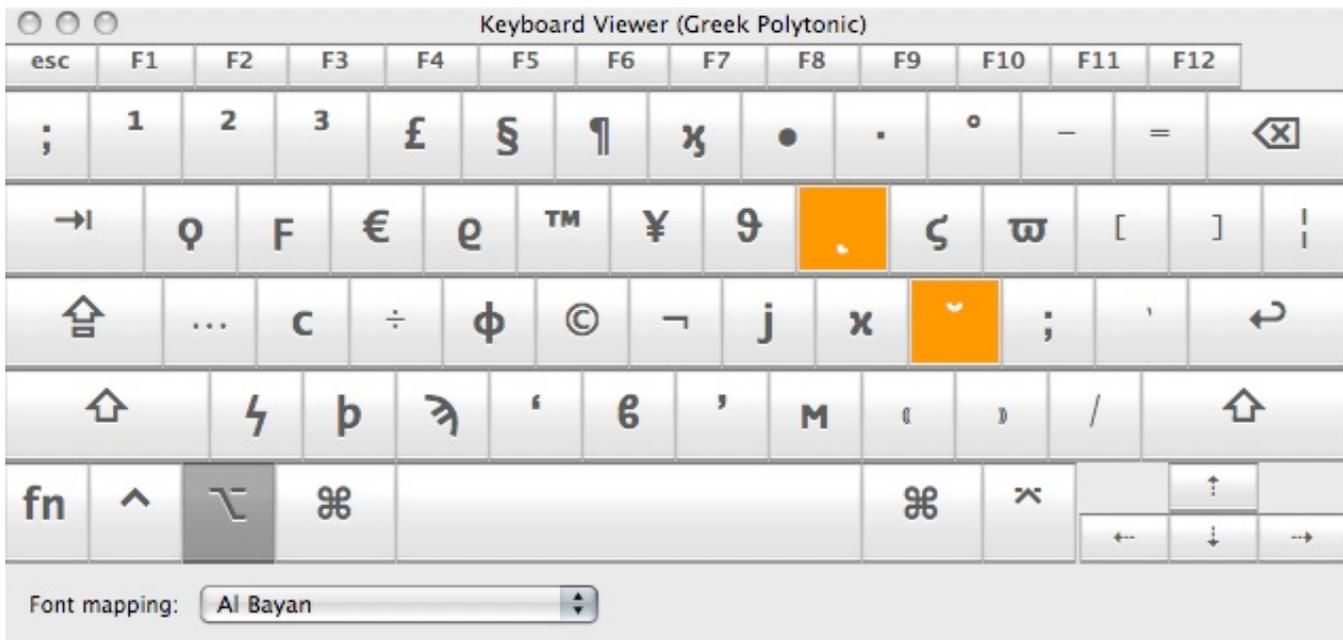

Natural State (no shift or other modifier keys)

Shift

Option

Shift + Option
