Greek Polytonic Keyboard (Windows)

Windows XP
This document shows the available characters on the Greek Polytonic keyboard layout that is built in to Windows XP.

Dead Keys (highlighted in yellow)
To add diacritics to characters, this keyboard uses dead keys. To add a diacritic to a character, first press the necessary keys for the diacritic, release those keys and then type the character that you are modifying.

e.g. for α type ; [release] a

Graphical Layout
Below are graphical layouts of the different states of the keyboard. Each keyboard state is labeled by the necessary modifier key (Shift, Control, etc) held down to create that state.

Natural State (no shift or other modifier keys)
